Procedure Report

The procedure, risks, benefits and alternatives to the procedure were explained to the patient. Questions were answered and a consent for 'the insertion of hormone pellets' was signed.

An area in the _____ was prepped with alcohol solution. 1% lidocaine with epinephrine was used to anestitize the area. The area was re-prepped. A small transverse incision was made using a number 11 blade. The trochar with cannula was passed through the incision into the subcutaneous tissue. _____ mg testosterone pellet(s) and _____ mg estradiol pellet were inserted through the cannula into the subcutaneous tissue. Bleeding was minimal. A sterile dressing was applied. The patient tolerated the procedure well. Post operative instructions were given to the patient.
